

# Quality Assurance

## Simple, Easy Protection For Hard To Protect Open Edged Stairways

The StringerShield Guardrail Clamping System easily clamps onto the unprotected edge of the stringer channel without drilling or damaging the stairway structure.

We now offer a **NEW THIN CLIP** for thin width stringer plate applications. The new thin clips can accommodate 1/4" (0.25) up to 1-1/2" (1.50) flat steel plate applications.

### Toll Free Technical Support

Contact our qualified support technicians with any questions or comments at 1.800.804.4741

## Non-Penetrating

Each StringerShield unit should be secured at a maximum of eight feet on centers, with many staircase structures needing only two or three units per flight for dependable OSHA compliant temporary stair rail systems.

### Confidence & Reliability

The StringerShield has been tested to exceed Federal OSHA stair rail strength regulations and is in compliance with United States Federal OSHA stair rail standard when guarding unprotected stringer stairs or pan stairs.

The StringerShield is simple to install, extremely strong and durable. It is **NOT** a typical thin walled guardrail stanchion, it's tough construction ensures many reuses to save time and money on your fast-paced construction projects.

Detailed Installation Instructions and Stress Engineering Report Summary are provided with all orders.

## Simple Fast Construction

StringerShield's unique design is easily adjustable and fits various sizes of stringers. Construction grade (stress grade) lumber can be utilized to construct the top rail and mid rail. 2X4 holders allow for simple installation and the system easily removes for use on the next level or project.

The StringerShield Securely Clamps Onto The Edge Of The C-Channel Without Any Penetration

Two Adjustment Screws Are Provided To Easily Tighten The Tension On Each Unit

Proudly Manufactured in the USA!
