VersiShield Clamping System

allows contractors to quickly erect OSHA compliant guardrail and stair rail systems on open edge structures in many commercial and residential construction situations.

The VersiShield Guardrail & Stair Rail Clamp is true to its name by being versatile. The system can be utilized on both horizontal structures such as horizontal balcony and bridge decks as well as odd angled structures such as concrete pre-formed stairs.

Toll Free Technical Support

Contact our qualified support technicians with any questions or comments at 1.800.804.4741

Non-Penetrating

Drilling into the stairway or deck structure is not necessary—the clamping device swivels into place on odd angles and locks securely onto the edge of the structure.

The VersiShield Clamping System can be utilized on concrete structures in multi-story commercial and multi-family projects as well as some residential pre-manufactured wooden stairway systems.

Confidence & Reliability

Stress engineering report summary is provided with all orders in the event of an on-site safety inspection.

Simple Fast Construction

The VersiShield easily adjust in one inch increments and lock securely in place with one single tension bolt for quick and simple installation.

All shipments include an independent stress engineering report showing the effectiveness and strength of this system, ensuring full OSHA compliance.

✓	Commercial Applications Concrete Stairway Protection, Elevator Shaft Protection, Bridge Protection	COMMERCIAL
✓	Multi-Family Applications Balcony Protection, Decks, Concrete Pre-Formed Stairway Protection	MULTI-FAMILY
✓	Industrial Applications Steel Decking Protection, Elevator Shaft Protection, I-Beam Protection	INDUSTRIAL
